

Ideation Phase

Empathize & Discover

Date	31 January 2025
Name	Aditya Kumar Singh
Project Name	Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it.

Project: Heritage Treasures — UNESCO World Heritage Sites Analysis

EMPATHY MAP CANVAS	
💭 THINK & FEEL	
• Worries about the loss of cultural heritage due to climate change, conflict, and neglect • Aspires to use data-driven approaches to advocate for heritage conservation • Concerned that Europe dominates UNESCO listings while Africa and Arab States are underrepresented • Wants to understand if inscription rates are declining and what that means for future generations	
👂 HEAR	👁 SEE
• UNESCO announces new endangered sites every year • Researchers say raw datasets are too complex for non-technical users • Policy makers ask for interactive dashboards, not static reports • Influencers say visual storytelling drives more awareness than text reports	• Raw CSV data with HTML tags, nulls, and inconsistent formatting • Maps showing Europe is heavily weighted in UNESCO listings • 53 sites marked as 'In Danger' with no unified visual overview • Year-over-year inscription trends declining since 2000 peak
💡 SAY & DO	
• 'I need to understand which regions have the most heritage sites and why' • 'Show me which sites are most at risk in an easy-to-read format' • Downloads UNESCO data from Kaggle but struggles to interpret raw CSV • Tries to create charts in Excel but finds it limiting for geographic data	
😞 PAIN	😊 GAIN
• Raw data has HTML tags, nulls, inconsistent fields • No single dashboard showing endangered sites • Hard to identify trends without visualization tools • Difficult to compare regions without interactive filters • Frustration from spending hours cleaning data manually	• Clean, analysis-ready dataset with 18 fields • 8 interactive Tableau charts with filters • 2 dashboards — Overview + Danger Sites • 10-scene Tableau Story for narrative insights • Flask web app making analysis publicly accessible

User Persona Summary

Attribute	Description
Name	Dr. Priya Sharma (Researcher/Policy Analyst)
Age	32 years old
Role	Heritage Conservation Researcher at a UN-affiliated NGO
Goal	Understand global heritage site distribution and identify endangered sites to inform policy decisions

Frustration	Raw data is messy, no unified visual tools, reports are static and hard to share
Solution Needed	Interactive Tableau dashboards with filters, a data story, and a web-accessible interface
