

Project Design Phase

Proposed Solution Template

Date	06 July 2026
Team ID	[Enter Your Team ID]
Project Name	Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	UNESCO World Heritage Site information is scattered across lengthy, text-heavy sources (the official site list, country pages, PDF reports). There is no easy, visual way for students, researchers, educators, or travelers to explore trends across all 1,121 sites by region, category, danger status, or year of inscription.
2.	Idea / Solution description	“Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites” — an interactive Tableau dashboard and story built on a fully cleaned dataset of all 1,121 sites. It includes a world map, region/category breakdowns, a dedicated danger-sites analysis, and an inscription-year forecast, all tied together in a guided Story and published as a single shareable Tableau Public link.
3.	Novelty / Uniqueness	Combines descriptive (region/category counts), geographic (world map), and predictive (year-inscribed forecasting) views in one cohesive, guided narrative rather than a single static chart. Built on a rigorously cleaned dataset — verified for zero duplicate rows, zero HTML/encoding artifacts, and summary totals that match the underlying 1,121 records exactly.
4.	Social Impact / Customer Satisfaction	Raises public awareness of endangered heritage (53 sites currently “In Danger”) and makes global cultural and natural preservation data accessible to non-technical audiences. Gives students, educators, and researchers a free, self-serve tool to support learning and analysis.

5.	Business Model (Revenue Model)	Currently a free, open exploratory tool published on Tableau Public for educational and portfolio use. Could be extended into a licensed analytics module for tourism boards or heritage organizations, or offered as a sponsored public-awareness dashboard for cultural institutions.
6.	Scalability of the Solution	The data model can be refreshed each year as UNESCO inscribes new sites without redesigning existing charts. The same clean → connect → visualize → publish pipeline can be reused for other open cultural, environmental, or government datasets.
