

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	06 July 2026
Name	Aditya Kumar Singh
Project Name	Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)
FR-1	User / Viewer Access - Access dashboard via public Tableau Public link (no login required) - Responsive viewing on desktop and mobile browsers
FR-2	Data Collection & Cleaning - Collect raw UNESCO World Heritage Sites data (1,121 sites, 18 fields) - Clean text fields: remove HTML entities, stray tags, and whitespace - Validate and de-duplicate records; verify summary counts against raw data
FR-3	Data Visualization - World map of heritage sites by Category and Region - Bar/pie charts for Region, Category, and Danger Status distribution - Time-series/forecast chart of site inscriptions by year
FR-4	Dashboard & Story Development - Combine sheets into Dashboard 1 (Global Overview) and Dashboard 2 (Danger Sites Analysis) - Build a guided Story ("Story 1") sequencing all views into a narrative
FR-5	Filtering & Interactivity - Filter by Region, Category, and Danger Status - Hover tooltips on map, bar, and pie charts - Search/highlight a specific site by name
FR-6	Publishing & Sharing - Publish workbook to Tableau Public - Enable image export/download for individual views

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Dashboard uses consistent color-coding for Region/Category across every sheet, clearly labeled filters, and a guided Story so first-time viewers can orient themselves quickly.
NFR-2	Security	Only publicly sourced, non-sensitive UNESCO open data is used; no personal or confidential information is stored or displayed.
NFR-3	Reliability	Dashboards render consistently across major browsers (Chrome, Edge, Safari) and summary figures are verified to match the underlying 1,121-row dataset exactly.
NFR-4	Performance	Dashboard loads within a few seconds despite 1,121 marks on the map; filter and hover interactions respond in under 1 second using Tableau's in-memory extract.
NFR-5	Availability	Published dashboard is available 24/7 to any viewer with the Tableau Public link, with no dependency on the author's local machine.
NFR-6	Scalability	The data model and workbook structure can absorb new yearly UNESCO inscriptions or additional attributes without redesigning existing charts.
