

Project Design Phase

Solution Architecture

Date	06 July 2026
Name	Aditya Kumar Singh
Project Name	Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Heritage Treasures — Solution Architecture Diagram:

Solution Architecture — Heritage Treasures: UNESCO World Heritage Sites in Tableau

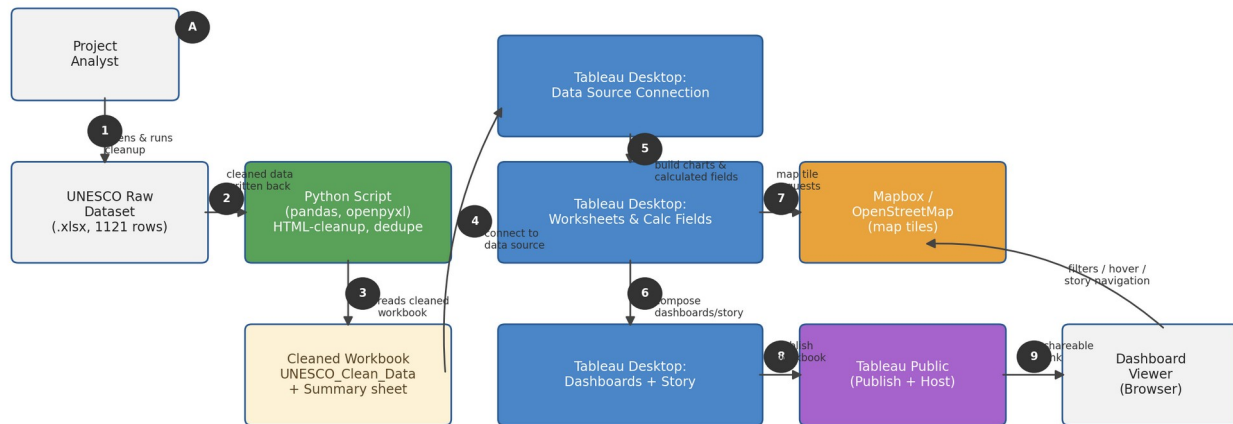

Figure 1: Architecture and data flow of the Heritage Treasures UNESCO World Heritage Sites Tableau dashboard

Flow narrative:

- (1–2) The project analyst runs a Python cleaning script (pandas, openpyxl) against the raw UNESCO dataset to remove HTML entities, whitespace, and duplicates.
- (3–4) The cleaned workbook (UNESCO_Clean_Data + Summary sheets) is opened in Tableau Desktop and connected as the live data source.
- (5–6) Worksheets, calculated fields, dashboards, and the guided Story are built on top of that data source.
- (7) The map views request tiles from Mapbox / OpenStreetMap for the world map visualization.
- (8–9) The finished workbook is published to Tableau Public, which serves the dashboard to any viewer via a shareable link.
- The viewer's filters, hovers, and story navigation are handled live by Tableau Public without needing to re-open Tableau Desktop.
