

AI Tools Used

Date	06 July 2026
Name	Aditya Kumar Singh
Project Name	Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau
Maximum Marks	2 Marks

AI Tools Used:

Documenting the specific artificial intelligence tools and platforms utilized during your project lifecycle helps evaluate efficiency and technological integration. Detail each AI tool, how it was applied, and the tangible benefit it provided to your workflow or final product.

S.No	AI Tool / Platform Name	Specific Use Case / Application	Project Phase Applied	Impact / Benefit
1	Claude (Anthropic)	Generated the Python (pandas/openpyxl) data-cleaning script, and authored the full project documentation suite (DFD, requirements, architecture, planning, performance testing, and final report) from raw project data and screenshots.	Data Preparation & Documentation Phase	Cleaned 254 problematic cells (HTML entities/whitespace) automatically and produced a complete, consistent documentation set in a fraction of manual authoring time.
2	Blackbox AI (VS Code extension)	Assisted with writing and debugging the Flask application — routes, Jinja templates, and static asset wiring for the Home/About/Dashboard/Storyboard pages.	Development Phase	Sped up scaffolding of the Flask app's routes and templates during implementation.
3	Tableau built-in Forecasting (AI/ML)	Applied exponential smoothing forecasting to the Year Inscribed field to project future heritage site inscription trends.	Visualization Phase	Added a predictive trend line without manual statistical modeling.
